

# GOLDENROD® “See-Thru” Fuel Tank Filters

There are three types:

## 495 General Purpose

- Translucent bowl (allows visual monitoring of fuel flow)
- Easy-to-use sediment drain valve
- Zinc die-cast top cap
- 10 micron filtration

## 496 WATER-BLOCK®

- Detects and absorbs water, restricting fuel flow when it's time to replace the element
- Same bowl, gaskets, and top cap as model 495
- 17 micron filtration

## 497 BiO-FLO™

- For use with 100% biodiesel fuel
- Nickel-plated top cap
- Special rubber gaskets
- Special element with stainless steel components
- 10 micron filtration

On the subject of interchangeability:

- 495 and 496 components (other than the element itself) are interchangeable.
- However, when it comes to biodiesel, it gets tougher. The only standard component that works is the bowl, and even then, it requires a different gasket.
- The 40-mesh and 80-mesh strainers WILL work with biodiesel. They are made of stainless steel components.

For visual purposes, the photos below show the four components in a complete unit:
